PROFILE

Software Engineering Intern at Microsoft and Computer Science student at Dublin City University, with experience contributing to a large-scale authentication platform and building full-stack applications. Skilled in developing secure, scalable backend solutions, automated test infrastructure, telemetry-driven validation, and safe production rollouts in collaborative engineering environments.

WORK EXPERIENCE

Software Engineering Intern, Microsoft — Identity and Network Access team

Dublin, Ireland | 06/2026 – 09/2026

- Merged 24 pull requests, including the migration of 8 authentication and session artifact types from a legacy protection format to a newer signing and validation format, while preserving backward compatibility
- Accelerated future artifact onboarding by developing reusable migration infrastructure and data-driven test frameworks, standardising validation across up to 37 artifact types and reducing repeated implementation work
- Supported the safe rollout and validation of 10 production features and configuration changes through staged deployments, telemetry analysis, controlled test environments, and rollback planning
- Created a local UX-test AI skill that reduced targeted feedback turnaround from 1-2 hours in the cloud to 5 minutes, and updated an artifact-onboarding AI skill with reusable architectural and testing guidance

EDUCATION

Dublin City University, Bachelor of Science in Computer Science

Dublin, Ireland | 09/2024 – 05/2028

- First Class Honours (1.1) in Years 1 and 2; ranked in the top 10 of 140 students. 2nd year transcript: [link](#)

PROJECTS

Menu+ | QR Menu Builder CMS [Live](#) | [GitHub](#)

- Created 20 REST API endpoints using FastAPI and PostgreSQL (Supabase) with JWT-based authentication
- Designed multi-tenant data model supporting multiple venues, menus, and QR-based ordering flows
- Implemented image upload and processing, QR code generation, and WhatsApp-based ordering integration
- Deployed React + FastAPI application with Docker and automated deployments and documented APIs

Scam Message Detector | AI-Assisted Android Application | [GitHub](#)

- Built a Kotlin Android application using Jetpack Compose, Hilt, Retrofit, and the LLM API to analyse SMS messages, emails, and URLs, returning a structured risk level, confidence score, and explanation
- Implemented secure API-key configuration, JSON response validation, MVVM state management, coroutine-based unit tests, and UX safeguards including input limits, timeout handling, and scrollable results

AWARDS & ACHIEVEMENTS

2nd Place Annual CTF 2026 | University of Galway [link](#)

- Outperformed 30 teams nationwide by solving complex challenges in cryptography and web security, demonstrating tenacity and the ability to dive deep into ambiguous vulnerabilities under strict time constraints

Datalex Best DIME Project Award 2025 | Dublin City University [link](#)

- Won €2,500 prize for the best digital innovation project among 44 teams, recognized for building a high-impact, scalable solution that addressed real user needs under tight project constraints

SKILLS

- **Programming:** Python, C#, Java, JavaScript, TypeScript, C, C++
- **Full-Stack:** React, FastAPI, .NET Core, REST APIs, SQL, PostgreSQL, Entity Framework Core, SQLAlchemy
- **Security:** Authentication and Authorization, OAuth 2.0, JWT, Secure API Development
- **Testing & Quality:** Unit Testing, Automated Testing, Data-Driven Testing, API Validation
- **AI-Assisted Development:** LLM Integration, AI Agents, Agentic Workflows, MCP, Prompt Engineering
- **Cloud & Tools:** Git, Docker, Linux, Swagger/OpenAPI, CI/CD
